Course Learning Objectives
The class is an in-depth exploration of the current state of the world trading system. We begin by examining the current magnitudes and past history of world trade, the development of the institutions of trade, and simple insights into the economic rationale for the international exchange of goods and services. The second part of the course will investigate a number of topics that pertain to current debates surrounding trade-related issues such as: trade and the environment, trade and child labor, trade and poverty, trade and labor standards, trade and intellectual property, etc. Through the use of lectures, discussions and assignments, we will develop basic competency in recognizing and analyzing relevant trade-related issues.
